

## OS: Fedora 43 Workstation (Gnome workstation)

## 1. Fedora 43 Post install

- `sudo dnf update`
- `sudo dnf upgrade`
- `sudo dnf install https://mirrors.rpmfusion.org/free/fedora/rpmfusion-free-release-$(rpm -E %fedora).noarch.rpm https://mirrors.rpmfusion.org/nonfree/fedora/rpmfusion-nonfree-release-$(rpm -E %fedora).noarch.rpm`
- `sudo dnf swap 'ffmpeg-free' 'ffmpeg' --allowerasing`
- `sudo dnf group update core`
- `sudo dnf swap ffmpeg-free ffmpeg --allowerasing`
- `sudo dnf group upgrade multimedia --exclude=PackageKit-gstreamer-plugin`
- `sudo dnf group upgrade sound-and-video`
- `flatpak remote-add --if-not-exists flathub https://dl.flathub.org/repo/flathub.flatpakrepo`
- `sudo fwupdmdmgr get-updates`
- `sudo fwupdmdmgr update`
- `sudo dnf group upgrade core`

## Fixing Brightness function keys

- Open the file 'grub' present at /etc/default/grub (or run `sudo nano /etc/default/grub`)
- Find the 'GRUB\_CMDLINE\_LINUX' line and add one of these parameters (try them one at a time)
  - `acpi_backlight=native`
  - `acpi_backlight=video`

regenerate GRUB and reboot:

- `sudo grub2-mkconfig -o /boot/grub2/grub.cfg`
- `sudo reboot`

## Fixing Trackpad scrolling speed

follow the guide below

<https://ubuntuhandbook.org/index.php/2023/05/adjust-touchpad-scrolling-ubuntu/>

## Installing Nvidia Drivers

Prerequisites:

- Disable secure boot in BIOS Settings
- Go to Software, Menu (top right), Software Repositories (*ctrl* + . to navigate quickly). Scroll down to 'RPM Fusion for Fedora 43 - Nonfree - Nvidia Driver' (or 'RPM Fusion for Fedora 43 - Nonfree' if previous entry can't be found) and enable it.

Run the following commands:

- Check that system is up to date
  - `sudo dnf upgrade --refresh`
- Identify your NVIDIA Graphics card:
  - `lspci | grep -E "VGA|3D"`
- Install NVIDIA Drivers:
  - `sudo dnf install akmod-nvidia`
  - `sudo dnf install xorg-x11-drv-nvidia-cuda` (Recommended for CUDA support)
- Reboot the system and verify driver installation:
  - `nvidia-smi`
- 

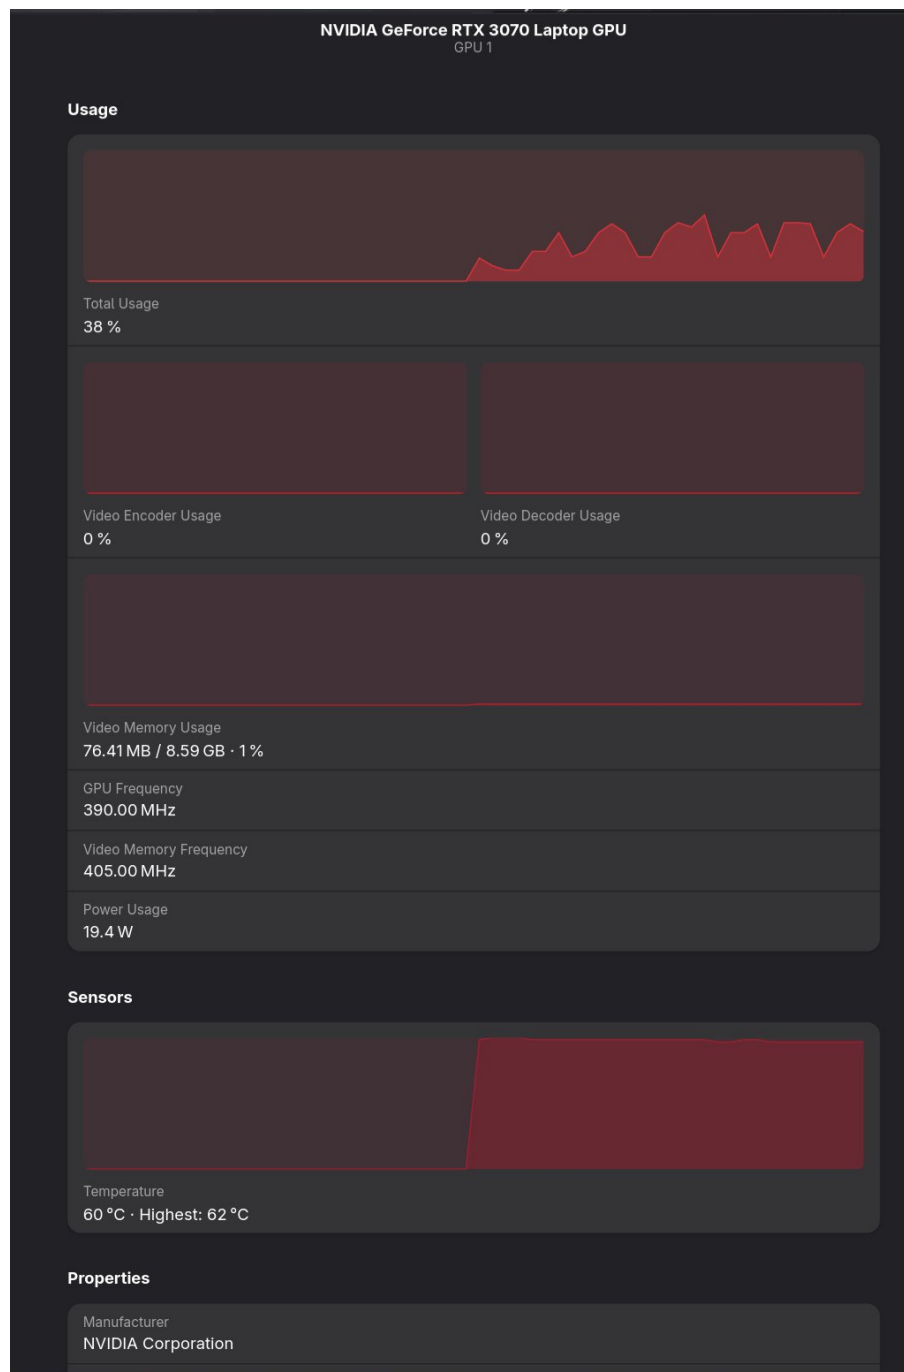

Verify  
System

```
merlin@mothership:~/Workstation/Job-Tracking-System$ nvidia-smi
Thu Mar 26 14:16:59 2026

+-----+
| NVIDIA-SMI 580.126.18              Driver Version: 580.126.18      CUDA Version: 13.0     |
+-----+-----+
| GPU   Name                               Persistence-M | Bus-Id        Disp.A | Volatile Uncorr. ECC |

mmemermmermermerlimermermemmmmmmmmmmmmmmmmm
```

Output  
should  
be a  
table  
similar  
to this:  
your

Monitor (or equivalent task manager) shows the GPU information:

And with this, you have successfully installed NVIDIA Drivers! Do note that some applications like Discord might need to be re-installed for usual experience.

## Software set-ups

### 1. Signal

Signal stores encryption keys in plain text on Fedora. To fix this, run

- `sudo flatpak override --env=SIGAL_PASSWORD_STORE=gnome-libsecret org.signal.Signal`

## 2. Docker

- `sudo dnf remove docker \ docker-client \ docker-client-latest \ docker-common \ docker-latest \ docker-latest-logrotate \ docker-logrotate \ docker-selinux \ docker-engine-selinux \ docker-engine`
- `sudo dnf config-manager addrepo --from-repofile https://download.docker.com/linux/fedora/docker-ce.repo`
- `sudo dnf install docker-ce docker-ce-cli containerd.io docker-buildx-plugin docker-compose-plugin`
- `sudo systemctl enable --now docker`
- `sudo groupadd docker`
- `sudo usermod -aG docker $USER`

## 3. Vivaldi

The Flatpak version has ongoing sandboxing friction on Fedora. The native RPM avoids all of this:

- Add Vivaldi's official repo
  - `sudo dnf config-manager addrepo --from-repofile=https://repo.vivaldi.com/archive/rpm/\$basearch`
- Install native RPM
  - `sudo dnf install vivaldi-stable`
